ext_hotkeys howTo

description

ext_hotkeys is a web browser extension for chrome to create your own database of hotkeys so you can keep working faster and efficiently without worrying of complex solutions. right now is able to handle 4 hotkeys, however you can add more checking the code.

```
Ctrl+Shift+1 | Ctrl+Shift+2 | Ctrl+Shift+3 | Ctrl+Shift+N
```
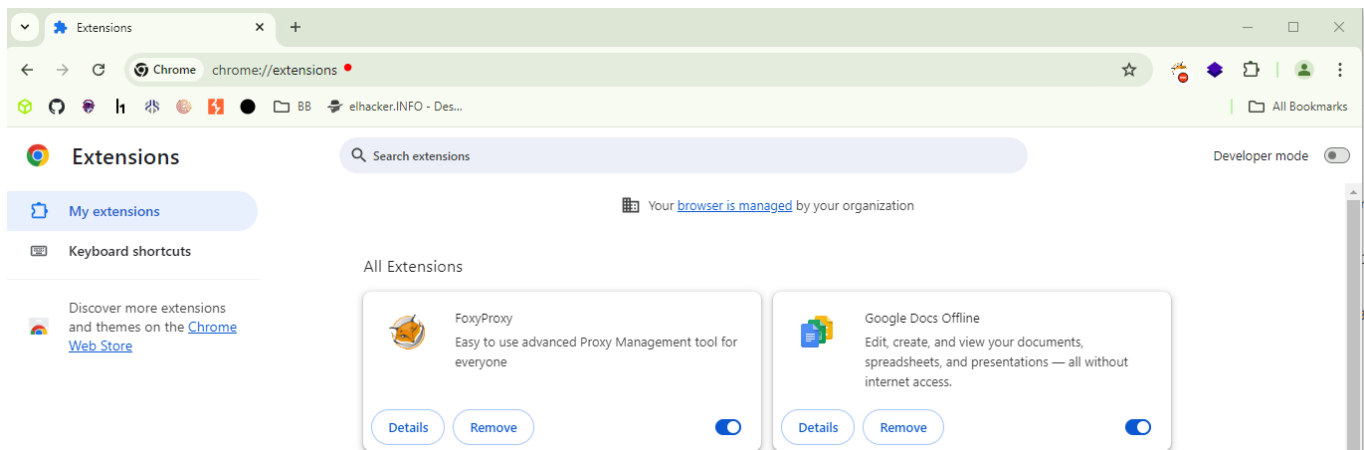

Note: need customization

import

1. download the file "ext_hotkeys", save it in your preferred location

```
Note: The folder should contain two files, the manifest and the action script that
performs the actions.
```
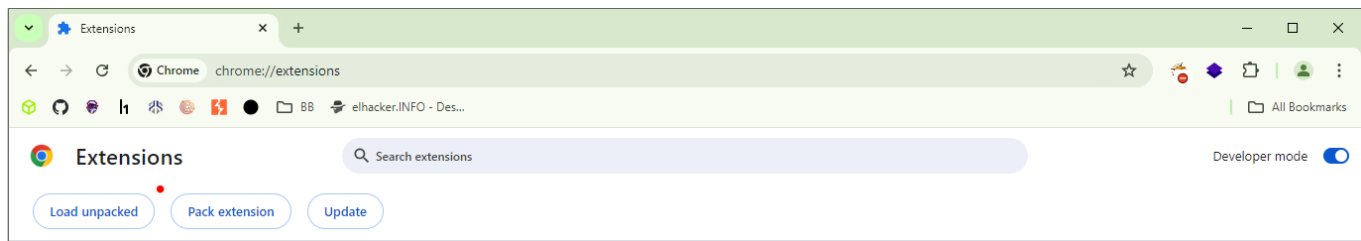

2. open the browser chrome
3. type: chrome://extensions

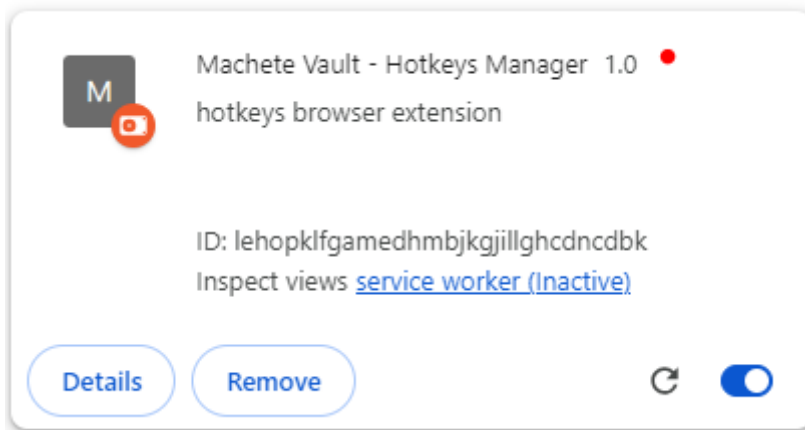

5. enable developer mode

6. click "Load unpacked"

7. find the folder "ext_hotkeys"

8. if everything OK, you should see something similar to the following.

Machete Vault - Hotkeys Manager   1.0
hotkeys browser extension

ID: lehopklfgamedhmbjkgjillghcdncdbk
Inspect views service worker (Inactive)

Details   Remove

9. toggle a couple of times to refresh the extension

Machete Vault - Hotkeys Manager   1.0
hotkeys browser extension

ID: lehopklfgamedhmbjkgjillghcdncdbk
Inspect views service worker (Inactive)

Details   Remove
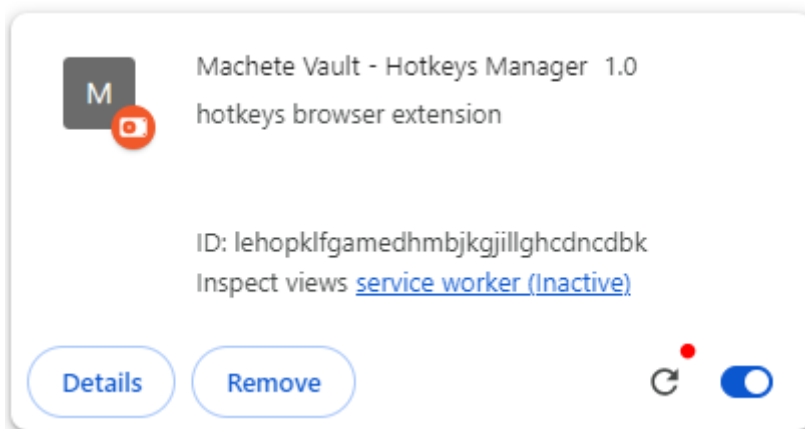

10. done

usage

1. go to the place you want to use a hotkey
2. type the key combinations associated to the hotkey you want to invoke
